

Our Institute tries to meet the individual needs of those who attend by assessing areas of practice and communities served, and matching identified objectives with appropriate activities.

The NJMS Global Tuberculosis Institute
225 Warren Street
Newark, NJ 07101

Personalized Training in TB Control

Applicants must be from one of the 20 project areas served by the NE-RTMCC and be involved in TB control in either a clinical or public health setting (e.g., physicians, nurses, outreach workers, disease investigators).

For additional information on how to take advantage of this unique opportunity, please contact Nisha Ahamed by email at ahamedni@umdnj.edu or by phone at 973-972-9008.

Mini-fellowship Opportunities

Fellowships last from 2 to 5 days and are held at the Global TB Institute in Newark, NJ.

The New Jersey Medical School – Global TB Institute (NJMS-GTBI), the Regional Training and Medical Consultation Center (RTMCC) for the northeastern region of the U.S, offers mini-fellowship trainings to provide first-hand knowledge and experience in carrying out various aspects of TB prevention and control.

Our Institute tries to meet the individual needs of those who attend by assessing areas of practice and communities served, and matching identified objectives with appropriate activities.

Our goal is to share TB expertise and knowledge with health care providers from a variety of settings, which can then be translated into clinical and public health practice.

This is what our mini-fellows said about their experience with us:

"The one on one interactions were fantastic! It is always exciting to learn from the experts."

". . . participating in the Mini-fellowship helped me to enhance my own skills and clarify doubts."

"All of the physicians provided me with valuable information that I will take back to the TB program where I work."

"Thanks to you and your fantastic team for the rewarding mini-fellowship you organized for me . . ."

". . . I was able to experience a wide breadth of TB related activities that would have been difficult to replicate [anywhere else] ."

Think of the Possibilities . . .

- Individual or small group interactions with experts on medical management of TB, case management, MDR-TB, epidemiology, program management & evaluation, TB & HIV, cohort review, behavioral science, education and training
- Meet with our TB doctors, nurses, clinic staff and outreach workers
- Shadow TB doctors and observe actual doctor-patient interactions
- Shadow case workers in the field (home visits and hospital surveillance)
- Observe a case conference and/or new patient update with clinic staff
- Observe & participate in TB Grand Rounds
- Tour the PHRI lab
